PROFESSIONAL SUMMARY

Driven Computer Science student with proven ability to build production-grade AI and backend systems from the ground up. Demonstrated success in improving system performance and prediction accuracy through innovative engineering solutions. Passionate about leveraging GenAI and intelligent automation to solve complex real-world problems. Seeking opportunities to contribute technical expertise and drive impactful results as an **AI/ML Engineer or Backend Software Engineer**.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL

Core CS: Data Structures and Algorithms, OOP, System Design, Time & Space Complexity

Backend: FastAPI, RESTful API Design, Async Programming, Microservices, Distributed Systems

Databases: PostgreSQL, Supabase, Vector Databases, Query Optimization, Database Indexing

Cloud & DevOps: Docker, AWS (EC2), API Deployment, CI/CD

GenAI & LLMs: LangChain, LangGraph, RAG, MCP, Prompt Engineering, Agent Orchestration

ML & Data: TensorFlow, Scikit-learn, SARIMAX, Pandas, NumPy, Feature Engineering, Model Evaluation

Tools: Git, GitHub, VS Code, copilot, Logging, Debugging, SDLC, Postman

EXPERIENCE

DevX

Dec 2025 – Jan 2026

AI/ML Intern

Remote

- Developed and deployed a machine learning forecasting engine, improving prediction accuracy by **70%** through feature engineering and model optimization.
- Built scalable inference workflows using **FastAPI** and integrated async endpoints for real-time predictions.
- Implemented data preprocessing pipelines with **Pandas** and **NumPy**, reducing preparation time by **40%**.
- Collaborated with cross-functional teams to translate business requirements into ML solutions and production APIs.

Orydle

Jan 2026 – Present

Backend Engineer (Intern)

Remote

- Building an AI-powered cloud IDE by integrating intelligent code completion, contextual suggestions, and semantic search using **RAG** and **vector indexing**.
- Architected async backend systems for real-time code analysis, indexing, and retrieval using **FastAPI** and **PostgreSQL**.
- Implemented distributed workflow execution with checkpointing and WebSocket streaming for enhanced collaboration.
- Improved backend reliability and throughput by **30%** through optimized async design patterns and modular architecture.

PROJECTS

Jasper — Autonomous Financial Research System (FastAPI, LangGraph) [GitHub]

2025

- Built a production-grade, CLI-first system with deterministic pipelines for planning and execution.
- Engineered state-driven async workflows with strict failure handling using LangGraph.

StockIQ — AI Inventory & Demand Intelligence (SARIMAX, FastAPI, Pandas) [GitHub]

2025

- Built an end-to-end inventory forecasting system using **probabilistic SARIMAX models (P10/P50/P90)** for D2C businesses.
- Engineered multi-warehouse allocation logic and constraint-aware reorder recommendations (MOQ, lead time, safety stock).
- Designed explainable COD risk intelligence with deterministic policy actions to reduce RTO-driven logistics waste.

ClaimWise — Smart Insurance Assistant (FastAPI, LangChain, RAG) [GitHub]

2025

- Designed a modular backend system for an LLM-powered insurance assistant using retrieval-augmented generation.
- Reduced response latency by **60%** through efficient indexing and API optimizations.

Wealthify — AI Finance Manager (FastAPI, PostgreSQL, Docker, Scikit-learn) [GitHub]

2025

- Built backend services and RESTful APIs for AI-driven budget and expense forecasting achieving **90% accuracy**.
- Optimized database queries and backend workflows, improving synchronization performance by **35%**.

EDUCATION

Manipal University Jaipur

2023 – 2027

B.Tech in Computer Science and Engineering (Data Science)

GPA: 7.5 / 10
